Luxi Electronics Presenter™

The revolutionary and patent-pending Presenter® product series can form any sized switchers, splitters, matrix* with only two SKUs, and solve many problems of the current AV installations with this simple “out-of-the-box” solution. Instead of the traditional centralized system, the Presenter® uses flexible and scalable Distributed Switching system that can easily and quickly adapt to any system requirements by cascading multiple Presenter® transmitters (Tx) and receivers (Rx) with one Cat6 cable in between adjacent units. The RS-232 port on every box allows full system wide controls from a single point. An Ethernet port on every box provides internet access. Additional models with built-in scaler enable any source formats to any display formats in the same system.

Luxi Electronics developed this brand new multi-source multi-display AV system technology with brand new IC chips, communication protocols and uncompressed 18 Gbps transmission speed, which the current HDMI over Cat cable point to point solutions cannot match. Furthermore, this two SKU daisy chain approach simplifies the wire installation and can reach very long distances by daisy chaining more Tx or Rx in between.

* With 300 and 600 series
