PureLink launches new series of HDMI™ Premium certified cables

New ProSpeed 3000 Series

HDMI™ only gives its Premium Label to cables compatible to 4K/Ultra-HD and HDR. HDMI™ puts the manufacturers' cables through comprehensive tests, authentication and verification programs before a cable can be awarded premium status.

The Premium Label is only given to cables warranting these properties:

- 4K/Ultra HD: Resolutions of 4.096 x 2.160 pixels
- HDR: extended colour space, increased dynamic range
- Frame rates up to 60Hz
- Dolby Atmos®, Auro-3D®: three-dimensional audio formats
- HDMI 2.0b
- Support of full 18 Gbps bandwidth
- Minimized interference with wireless signals

The Premium Label guarantees future-proof product quality. By using a unique anti-counterfeiting QR code, certification is easily verifiable any time. www.hdmi.org

The high-speed cables consist of high-pure, tin-plated OFC copper cables with ultra dense triple shielding and a flexible PVC jack.

The shielded full metal housing with 24 carat gold plated connectors provides the best signal transmission quality available.

The plug is equipped with the tried and trusted **Secure Lock System™** developed by PureLink. It ensures a stable connection even under traction strain, up to a pulling force of 6.8 kgs. If this is exceeded, the cable automatically disconnects from the socket avoiding costly damage to the device.
